**Subject:** Re: CLP - R8 support

Hi Nick,

If the only change in requirements is for a modified turnaround time, we can handle that as a Solicitation Only. Solicitation Only projects do not require a change in the technical requirements or the use of an MA; however do allow the laboratories to bid on the modified TAT for the work. These can also quickly and easily be set up as they just require a bid sheet. Would the 24hr (36hr or 48hr) TAT be for PRs only or the full data package?

Please let me know if you would like CSC to conduct of poll of the current CASC (ISM) laboratories on their to provide 24hr, 36hr and/or 48hr TAT over the next couple weeks based on their current in-house work loads. The poll can be conducted for ICP-AES analysis primarily with the possibility of Hg and CN.

Thanks,

Caroline L. Kramer

Subject: CLP - R8 support

---

Caroline/Kerrie,

We are offering CLP support to regions R6, R8 and R9 for the Gold King Mine Release site. They are looking for ISM lab capacity, 24 hr TAT, and standard CLP deliverables. We are confirming the analyte list.  
<http://www2.epa.gov/region8/upper-animas-mining-district>

For now:

- 1) Please research the MA database for an existing 24 hr TAT ICP-AES (routine list and CRQLs) MA. If one exists in CASC format please send to ASB.
- 2) If one exists in the old contract format, please update to the new CASC format.
- 3) If nothing exists, please create a new MA in CASC format.

We are confirming the ICP-AES analysis and determining if Hg and CN are required.

There is the possibility for 36 hr and 48 hr TAT work also.

Thanks,  
Nick
